ID	Name	Type	Label	missings	Values	Value Labels	Freq.	%		
1	answer_id	integer	Unique answer ID	0 (0.00%)	range: 85-1047262					
2	answer_body	character	Answer provided to question	0 (0.00%)	'In the context of electricity, the diversity factor is the ratio of the sum of the individual non-coincident maximum loads of various subdivisions of the system to the maximum demand of the complete system. The diversity factor is always greater than 1.' Thank you! -- Learn by doing: Try a free coding class like on Code Academy, Free Code Camp, Coursera, where you build a project. Then apply it to a project you're passionate about. -- Learn by doing: try coding a language like Javascript, in a web browser. The advantage is you can start coding with no setup, paid software or anything, just a web browser like Chrome. You code in the browser and by looking at the console, see your code actually working! - - Visual the finish line; if you have an idea of what job you might want to do, look at job descriptions of those, and work backwards from there. What languages do they ask for? What kinds of work experience do they look for? Then you can set goals to achieve those, and work towards them. -- In Job interviews, often you need to show projects you built. ex. at Amazon you should talk about what you did, and deploy it, and show the				1 1 1 1	0.02 0.02 0.02 0.02

potential employer. On specific languages to try, you could start with a procedural language, ex. Javascript or Python, in particular Python as it's a broad language. Then suggest moving to an object-oriented programming language like Typescript, a step above Javascript with similar syntax.

- Always get your work submitted on time.
- Don't be afraid to ask the lecturer or your peers for help. You might even make a friend along the way.
- Focus on the present task - the most important for that day - and not the next 5 or the next 10.
- Or split your time evenly and set yourself time limits. If something is "so big and daunting" that you never get started on it, then allow yourself to only work on it for "5 minutes". Or 10. You'll find you naturally want to keep going, or come back to it with fresh ideas an hour later. It's a struggle nonetheless.

The thing that kept me going through my 3 year course was perhaps the very scarce but still present social life. I had some good friends from high school who although they were at different universities, I would hang out with them every Friday night or so and play video games. They would be studying similar things and so we could talk about our courses and assignments casually, which helped. Then at my university itself I had a small group of friends, but not from my

core classes. The computer science classes were always filled with introverted, quiet, focused people and there wasn't much opportunity to socialize. The Japanese language class was so fun and full of bubbly energetic people and that's where I made all my friends. We hung out at campus, then started going out to group lunches and dinners, it was great. It's 12 years later and I'm halfway across the world and they're still my friends for life. I guess my last piece of advice is it's ok to take some shortcuts here or there, if you're confident, or if you can afford to. During my study I had really long Wednesdays one semester, 9am Japanese lecture, 1pm Maths lecture and a 6-9pm Machine Learning lecture. I was stuck at the uni for 12 hours, and I always fell asleep during the 6pm lecture. I loved the machine learning content but the lecturer just didn't inspire, especially late at night. I was behind on the coursework for the whole year but whenever we had an assignment I'd always give it my all. I'd go over all the missed notes, do my own research and study on the subject, and just submit "something" by the deadline, showing that I understood at least some or all of the subject matter. I ended up with a distinction in that subject. Call me lucky or maybe just passionate but the motto

perhaps is, don't push yourself beyond your physical or mental limits. Don't try and get 100 on every course. Don't feel the need to be attentive for 12 hours straight. Just get done what you need to do. You'll learn either way. You'll get a job either way.
